Projects

- **ferme-roetling.fr**   www.ferme-roetling.fr

  Showcase website developed with *Astro*, using **TypeScript**.

  - Implemented image optimization techniques to enhance **SEO** and site performance.
  - Prioritized **mobile-first** design for cross-device compatibilty.
  - Versioned codebase using **conventional commit**
  - Implemented client/server-side data validation using the *Zod* with efficient server-side validation in *Vercel*'s **serverless functions**.
  - Implemented *Decap-CMS* a headless git based CMS.

- **mine-saint-nicolas.fr**   www.mine-saint-nicolas.fr

  Website for the Saint-Nicolas mine developed with **Next.js** and **Tailwind CSS**.

  - Hosting API-driven CMS (*Directus*) in a Docker environment on a **GNU/Linux** VPS server (*Debian*).
  - Implement **Edge Function Runtime** for Incremental Static Regeneration (**ISR**).
  - Developed a **Node.js** extension for *Directus* that calculates the Base64 representation of images.

- **Quetsch'App**   app.radio-quetsch.eu

  React Native Android mobile application

  - Implemented home screen controls.
  - Fetch and revalidate data from the backend API.
  - Developed a standalone web player page as a workaround for iOS users (https://player.radio-quetsch.eu).

- **PigePy**   pigePy.git

  Python command-line tool for archiving radio shows.

  - Implemented a scheduler that automatically removes archived shows after a user-defined number of days, optimizing storage management.
  - Provided users with configuration options to customize archiving and scheduling settings to suit their preferences and needs.
  - Implemented **multithreading** to enhance performance, enabling concurrent tasks.
